INVESTMENT OBJECTIVE AND STRATEGY

The Fund seeks to provide capital growth and income over the medium term, by investing all or substantially all its assets in a collective investment scheme that invests primarily in Asian fixed income securities and US government debts.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The Fund is suitable for investors with a medium to long-term investment horizon seeking to invest in Asian debt securities and have a moderate risk appetite.

GENERAL RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Interest Rate Risk:	The possibility of an investor to experience losses due to changes in interest rates.
Market Risk:	This is the possibility for an investor to experience losses due to changes in the market prices of securities.
Liquidity Risk:	This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss.
Inflation Risk:	This is the risk that arises from the changes in purchasing power due to inflation.
Credit / Default Risk:	This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.
Reinvestment Risks:	This is the possibility that an investor may experience losses due to probable lower returns or earnings when maturing funds or the interest earnings of the Fund are reinvested.
Foreign Exchange Risk:	This is the possibility for an investor to experience losses due to fluctuations in foreign exchange rates.
Country Risk:	This is the possibility for an investor to experience losses arising from investments in securities issued by/in foreign countries due to the political, economic and social structures of such countries.

You may also contact the BSP Financial Consumer Protection Department at (02) 7708-7087 or consumeraffairs@bsp.gov.ph.

RISKS SPECIFIC TO THE TARGET FUND

Further to the general risks above, the following risks are specific to the Target Fund:

- Emerging Markets Risk:** The Target Fund may invest in developing countries and emerging markets may involve increased risks including without limitation (i) investments and repatriation restrictions, (ii) currency fluctuations, (iii) the potential for unusual market volatility as compared to more industrialized nations, and (iv) certain local tax law considerations.
- Distribution Risk:** Dividend/interest income of the Target Fund may be adversely affected by investee entities suffering unexpected losses and/or paying lower than expected dividends, and adverse currency exchange rate fluctuations.
- Derivatives Risk:** The Target Fund may use Financial Derivatives Instruments including options, swaps, forwards and futures. Risks include default by the counterparty or the inability to close out a position because the trading market becomes illiquid.
- Currency Risk:** Fluctuation in foreign currency exchange rates will affect the value of the Fund's investments when converted into the currency of denomination of the Fund and subsequently the value of Holders' investments. The Target Fund may use foreign currency forwards to hedge the foreign currency exposure in full or partially, and may actively manage such exposure. The fund can buy USD or non-USD denominated bonds.
- Inflation Risk:** Inflation is a long term risk as it creates uncertainty over the future value of the investments. In an inflationary environment, a return on investment which is lower than the inflation rate will lead to a loss of purchasing power of the currency of the Units held by a Holder. For example, in fixed coupon that investors receive will be worth lesser in high inflation environment.
- Early Redemption Risk:** This Fund is not meant for short term investment. Early redemptions by investors may reduce the probability that the investment objectives of the Fund will be met.
- Large Redemption Risk:** The fund is an open ended fund. There can be periods when the Fund may receive large redemption notices from investors. The large size of redemption may lead to the possibility of selling the Fund's investments below the respective last marked to market prices especially during period of low market liquidity. Therefore, such events would be detrimental to the investors.
- Company Specific Risk:** Specific risks to securities issued by a company apply as there are adverse conditions or negative sentiments which a company can be uniquely exposed to, be it from the view of management issues, deteriorating business fundamentals or losing competitiveness. As a consequence, the price of securities issued by such company might fall and subsequently affect the Fund's performance.
- Counterparty Risk:** This fund invests into Asian bonds which are normally traded over-the-counter. It will expose the Fund to the risk that a counterparty may default on its obligations to perform under the relevant contract. If a counterparty becomes bankrupt or insolvent, the Fund could experience delays in liquidating an investment and may therefore incur significant losses, including losses resulting from a decline in the value of the investment during the period in which the Fund seeks to enforce its rights. The Fund may also be unable to realize any gains on the investment during such period and may incur fees and expenses to enforce its rights.
- Country Risk:** The investments of the Fund may be affected by risks specific to the country in which it invests. Such risks include changes in a country's economic, social and political environment. The value of the assets of the Fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the Fund invests into.

- THE UIT FUND IS NOT A DEPOSIT AND IS NOT INSURED BY THE PHILIPPINE DEPOSIT INSURANCE CORPORATION (PDIC).
- THE UIT FUND IS NOT AN OBLIGATION OF, NOR GUARANTEED, NOR INSURED BY THE TRUSTEE AND ITS AFFILIATES.

OUTLOOK

After a massive sell-off during October where the US 10 year Treasury yield pierced through 5%, the market turned around strong in November and December. US 10 year Treasury yield dropped more than 100bps, boosting the JP Morgan Credit Index up 6.4% in just two months. The year-end rally brought about a 7% return for FY2023. This was a very welcome change for bond fund managers who were tethering on an unprecedented consecutive third year of negative returns for most of FY2023.

Since early November, we have actively moved to extend duration on bond portfolios from underweight to overweight, as well as reinvesting cash from Treasury bills to long-end bonds to take advantage of the year-end rally. While we remain fully invested, we have turned slightly more cautious. We remember the false dawn a year ago when the JP Morgan Asia Credit Index, after a painful 18% selloff in the first ten months of FY2022, also reversed to deliver a dramatic 10% rally from October 2022 to January 2023. However, the party fizzled out soon after early February 2023 and have disappointed for most FY2023 until recently. While we currently remain invested, given the sharp rally in the past two months, there may be some price correction during 1QFY24. Therefore, it will be prudent to be alert as we roll into the New Year, which will bring new opportunities as well as new challenges.

For full year FY2024, we are positive on bond investments. On the macro front, inflation is dissipating and growth is slowing. This would pivot central banks from tightening pressure to easing. Bond valuation is attractive with yields of investment grade at 5% and high yield at 7%. Finally, we also feel that demand for bonds should improve as the hiking cycle has ended and we should see increasing insurance and fund flows into bond investments. On the other hand, we expect USD bond supply from Asia to be muted as issuers prefer to tap onshore funding. Local currency interest rates are lower and hedging costs have increased with higher USD rates. Higher demand and lower supply will be positive for bond prices.

Overall, we are expecting Treasuries to rally 30 basis points for FY2024, offset by potential credit spread widening of 10 basis points. Together with current index yield of 6.25%, total JACI return is expected to be around 6% to 8% for FY2024, which is very decent on a risk-adjusted basis as bond volatility historically has been low at 3% to 4%. Given increasing risks of recession, we prefer to extend duration on investment grade bond while selectively hold short duration BB rated high yield for carry. The key risks for FY2024 are the US Presidential elections and new or worsening geopolitical risks. Inflation pressure may build up again from geo-politics or trade protectionism. Therefore, we will continue to be watchful in FY2024 and will remain flexible and nimble.
