INVESTMENT OBJECTIVE AND STRATEGY

The Fund seeks to provide capital growth and income over the medium term, by investing all or substantially all its assets in a collective investment scheme that invests primarily in Asian fixed income securities and US government debts.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The Fund is suitable for investors with a medium to long-term investment horizon seeking to invest in Asian debt securities and have a moderate risk appetite.

GENERAL RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Interest Rate Risk:	The possibility of an investor to experience losses due to changes in interest rates.
Market Risk:	This is the possibility for an investor to experience losses due to changes in the market prices of securities.
Liquidity Risk:	This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss.
Inflation Risk:	This is the risk that arises from the changes in purchasing power due to inflation.
Credit / Default Risk:	This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.
Reinvestment Risks:	This is the possibility that an investor may experience losses due to probable lower returns or earnings when maturing funds or the interest earnings of the Fund are reinvested.
Foreign Exchange Risk:	This is the possibility for an investor to experience losses due to fluctuations in foreign exchange rates.
Country Risk:	This is the possibility for an investor to experience losses arising from investments in securities issued by/in foreign countries due to the political, economic and social structures of such countries.

RISKS SPECIFIC TO THE TARGET FUND

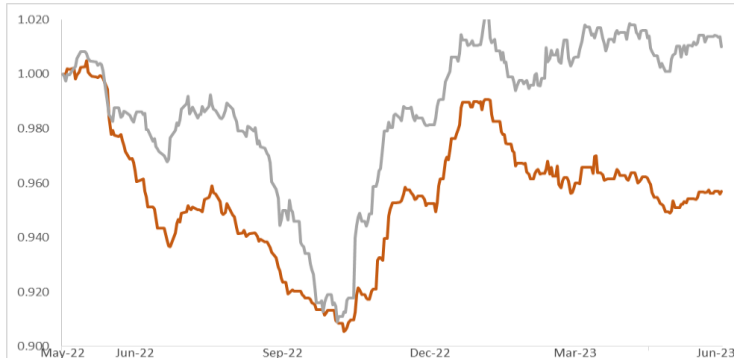

Further to the general risks above, the following risks are specific to the Target Fund:

- Emerging Markets Risk:** The Target Fund may invest in developing countries and emerging markets may involve increased risks including without limitation (i) investments and repatriation restrictions, (ii) currency fluctuations, (iii) the potential for unusual market volatility as compared to more industrialized nations, and (iv) certain local tax law considerations.
- Distribution Risk:** Dividend/interest income of the Target Fund may be adversely affected by investee entities suffering unexpected losses and/or paying lower than expected dividends, and adverse currency exchange rate fluctuations.
- Derivatives Risk:** The Target Fund may use Financial Derivatives Instruments including options, swaps, forwards and futures. Risks include default by the counterparty or the inability to close out a position because the trading market becomes illiquid.
- Currency Risk:** Fluctuation in foreign currency exchange rates will affect the value of the Fund's investments when converted into the currency of denomination of the Fund and subsequently the value of Holders' investments. The Target Fund may use foreign currency forwards to hedge the foreign currency exposure in full or partially, and may actively manage such exposure. The fund can buy USD or non-USD denominated bonds.
- Inflation Risk:** Inflation is a long term risk as it creates uncertainty over the future value of the investments. In an inflationary environment, a return on investment which is lower than the inflation rate will lead to a loss of purchasing power of the currency of the Units held by a Holder. For example, in fixed coupon that investors receive will be worth lesser in high inflation environment.
- Early Redemption Risk:** This Fund is not meant for short term investment. Early redemptions by investors may reduce the probability that the investment objectives of the Fund will be met.
- Large Redemption Risk:** The fund is an open ended fund. There can be periods when the Fund may receive large redemption notices from investors. The large size of redemption may lead to the possibility of selling the Fund's investments below the respective last marked to market prices especially during period of low market liquidity. Therefore, such events would be detrimental to the investors.
- Company Specific Risk:** Specific risks to securities issued by a company apply as there are adverse conditions or negative sentiments which a company can be uniquely exposed to, be it from the view of management issues, deteriorating business fundamentals or losing competitiveness. As a consequence, the price of securities issued by such company might fall and subsequently affect the Fund's performance.
- Counterparty Risk:** This fund invests into Asian bonds which are normally traded over-the-counter. It will expose the Fund to the risk that a counterparty may default on its obligations to perform under the relevant contract. If a counterparty becomes bankrupt or insolvent, the Fund could experience delays in liquidating an investment and may therefore incur significant losses, including losses resulting from a decline in the value of the investment during the period in which the Fund seeks to enforce its rights. The Fund may also be unable to realize any gains on the investment during such period and may incur fees and expenses to enforce its rights.
- Country Risk:** The investments of the Fund may be affected by risks specific to the country in which it invests. Such risks include changes in a country's economic, social and political environment. The value of the assets of the Fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the Fund invests into.

- THE UIT FUND IS NOT A DEPOSIT AND IS NOT INSURED BY THE PHILIPPINE DEPOSIT INSURANCE CORPORATION (PDIC).
- THE UIT FUND IS NOT AN OBLIGATION OF, NOR GUARANTEED, NOR INSURED BY THE TRUSTEE AND ITS AFFILIATES.

OUTLOOK

The US Fed signalled a hawkish pause during the June meeting as they raised their terminal interest rate expectations from 5.1% during the March meeting to 5.6% at the June meeting. In addition, the June Dot Plot indicated that the Fed does not expect any interest rate cuts until FY2024 as they expect US to enjoy a soft landing. This resonates uncomfortably with investors that expected US Fed to cut interest rate of up to 100bps to deliver double digit bond returns in FY2023. However since May, the probability of interest rate cuts in FY2023 has diminished due to the surprising resilience in US employment despite after 15 months of aggressive interest rate hikes.

Whether its one or two more interest rate hikes for the rest of the year, we believe that we are closer to the end of the interest hiking cycle versus the beginning of the year. Globally inflation has already peaked in 3Q2022 and have been on a downward trend this year. Growth has started to slow and consumers are feeling the pinch from higher prices and punitive interest costs. Savings accumulated during the Covid lockdown have been depleted, adding to negative consumer sentiment. As inflation normalizes and growth cycle slows, central banks globally should be looking to cut interest rates over the next two years. Therefore the fixed income market in FY2023 should do better versus last year.

Hence for 2H2023, we maintain a positive outlook on USD bonds. Current bond yields at 5% to 6% per annum for investment grade bonds and 9% for non-China high yield bonds does offer attractive return for investors over the next two to three years. Given that we are expecting growth to slow and even possible recession in the US, we prefer to position defensively in credit bonds by overweighting investment grade bonds and underweight high yield. We feel that investment grade yield at 6% per annum offers very decent carry for 2H23 and good price upside potential from FY2024 when central bankers start to cut interest rates.

In Asia credit space, we are expecting credit spreads to widen during 2H 2023, mainly due to potential credit spread widening in the high yield space. For the largest economy in Asia - China - we expect some policy support for the economy from China government, but not a package of strong stimulus. Therefore, we expect China to experience a slow growth for the rest of the year as the boost from the China re-opening was short-lived. China property market contract sales remain weak and developers continue to suffer liquidity stress. Country wise we prefer to underweight China and sector we prefer to overweight quasi-sovereigns and strong corporates.

Overall, we are expecting JP Morgan Asia Credit Index total returns of 3% to 4% for 2H23, bringing in returns of 6% to 7% for FY2023. We expect credit spreads to widen by 10bps to 30bps and US interest rate to fall 30bps to 50bps, resulting in a small rally in bond prices. Bond yield at 6.5% per annum will be the main contributor of performance.
