INVESTMENT OBJECTIVE AND STRATEGY

The Fund seeks to provide capital growth and income over the medium term, by investing all or substantially all its assets in a collective investment scheme that invests primarily in Asian fixed income securities and US government debts.

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The Fund is suitable for investors with a medium to long-term investment horizon seeking to invest in Asian debt securities and have a moderate risk appetite.

GENERAL RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Interest Rate Risk:	The possibility of an investor to experience losses due to changes in interest rates.
Market Risk:	This is the possibility for an investor to experience losses due to changes in the market prices of securities.
Liquidity Risk:	This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss.
Inflation Risk:	This is the risk that arises from the changes in purchasing power due to inflation.
Credit / Default Risk:	This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued.
Reinvestment Risks:	This is the possibility that an investor may experience losses due to probable lower returns or earnings when maturing funds or the interest earnings of the Fund are reinvested.
Foreign Exchange Risk:	This is the possibility for an investor to experience losses due to fluctuations in foreign exchange rates.
Country Risk:	This is the possibility for an investor to experience losses arising from investments in securities issued by/in foreign countries due to the political, economic and social structures of such countries.

You may also contact the BSP Financial Consumer Protection Department at (02) 7708-7087 or consumeraffairs@bsp.gov.ph.

RISKS SPECIFIC TO THE TARGET FUND

Further to the general risks above, the following risks are specific to the Target Fund:

Emerging Markets Risk: The Target Fund may invest in developing countries and emerging markets may involve increased risks including without limitation (i) investments and repatriation restrictions, (ii) currency fluctuations, (iii) the potential for unusual market volatility as compared to more industrialized nations, and (iv) certain local tax law considerations.

Distribution Risk: Dividend/interest income of the Target Fund may be adversely affected by investee entities suffering unexpected losses and/or paying lower than expected dividends, and adverse currency exchange rate fluctuations.

Derivatives Risk:

The Target Fund may use Financial Derivatives Instruments including options, swaps, forwards and futures. Risks include default by the counterparty or the inability to close out a position because the trading market becomes illiquid.

Currency Risk: Fluctuation in foreign currency exchange rates will affect the value of the Fund's investments when converted into the currency of denomination of the Fund and subsequently the value of Holders' investments. The Target Fund may use foreign currency forwards to hedge the foreign currency exposure in full or partially, and may actively manage such exposure. The fund can buy USD or non-USD denominated bonds.

Inflation Risk: Inflation is a long term risk as it creates uncertainty over the future value of the investments. In an inflationary environment, a return on investment which is lower than the inflation rate will lead to a loss of purchasing power of the currency of the Units held by a Holder. For example, in fixed coupon that investors receive will be worth lesser in high inflation environment.

Early Redemption Risk: This Fund is not meant for short term investment. Early redemptions by investors may reduce the probability that the investment objectives of the Fund will be met.

Large Redemption Risk: The fund is an open ended fund. There can be periods when the Fund may receive large redemption notices from investors. The large size of redemption may lead to the possibility of selling the Fund's investments below the respective last marked to market prices especially during period of low market liquidity. Therefore, such events would be detrimental to the investors.

Company Specific Risk: Specific risks to securities issued by a company apply as there are adverse conditions or negative sentiments which a company can be uniquely exposed to, be it from the view of management issues, deteriorating business fundamentals or losing competitiveness. As a consequence, the price of securities issued by such company might fall and subsequently affect the Fund's performance.

Counterparty Risk: This fund invests into Asian bonds which are normally traded over-the-counter. It will expose the Fund to the risk that a counterparty may default on its obligations to perform under the relevant contract. If a counterparty becomes bankrupt or insolvent, the Fund could experience delays in liquidating an investment and may therefore incur significant losses, including losses resulting from a decline in the value of the investment during the period in which the Fund seeks to enforce its rights. The Fund may also be unable to realize any gains on the investment during such period and may incur fees and expenses to enforce its rights.

Country Risk: The investments of the Fund may be affected by risks specific to the country in which it invests. Such risks include changes in a country's economic, social and political environment. The value of the assets of the Fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the Fund invests into.

- THE UIT FUND IS NOT A DEPOSIT AND IS NOT INSURED BY THE PHILIPPINE DEPOSIT INSURANCE CORPORATION (PDIC).
- THE UIT FUND IS NOT AN OBLIGATION OF, NOR GUARANTEED, NOR INSURED BY THE TRUSTEE AND ITS AFFILIATES.
- THE INVESTOR MUST READ THE COMPLETE DETAILS OF THE FUND IN THE UITF PLAN, MAKE HIS/HER OWN RISK ASSESSMENT, AND WHEN NECESSARY, SEEK AN INDEPENDENT/PROFESSIONAL OPINION BEFORE MAKING AN INVESTMENT.

OUTLOOK

Shortly after the U.S. FED implemented its first significant interest rate cut in September, Treasury bond yields rose. Has the bond rally come to an abrupt end before the easing cycle has even truly begun? We believe that the recent volatility in the bond market over the past month reflects a correction in market expectations regarding the pace of easing, rather than a signal of a complete policy reversal by the FED. As a result, we still anticipate that the U.S. FED will continue to cut interest rates heading into fiscal year 2025, but at a slower pace than initially expected by the market.

We recognise that the U.S. economy is at an inflexion which means there are a lot of cross currents from mixed incoming data for the rest of the year. Markets tend to react aggressively and may even overreact to any single data point. Adding to that turbulence, we have the upcoming U.S. elections and ongoing geopolitical tensions in the Middle East. We are potentially facing a diverse range of outcomes for the last quarter of 2024 (4Q2024), suggesting that there is scope for further market gyrations ahead. During fiscal year 2024 (FY2024), we have already witnessed four instances of bond volatility spikes and we may potentially see one more going into year end.

Therefore to manage the material unpredictability into year end, we prefer to stay neutral to marginal overweight in portfolio duration, rather than maximum duration overweight. We think bond yields are still attractive on a longer term perspective and the U.S. Fed is not likely to pivot back to interest rate hikes. However, bonds yields can stay higher for longer and yield curve is likely to steepen as FED continues to cut gradually. Overall, we prefer to overweight duration on the belly of the curve while staying light in the long-end. A soft or no landing means default rate should remain low, hence credit spreads can remain tight. Therefore we continue to hold some positions in higher yield space for additional yield.

Key risk to our positioning is a sustained resurgence in inflation risks or huge supply of U.S. Treasuries due to unsustainable U.S. deficit, causing Treasury yields to rise excessively which may also have contagion to Singapore Government Bond yield level.
